# Inference in Hidden Markov Models Part 1

Yuntian Deng

Lecture 10

Readings: RN 14.1 & 14.2.1, PM 8.5.1 - 8.5.3.

CS 486/686: Intro to Al Lecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen 1 / 45

#### Outline

Learning Goals

A Model for the Umbrella Story

Inference in Hidden Markov Models

**Filtering Calculations** 

**Filtering Derivations** 

Revisiting Learning Goals

CS 486/686: Intro to AI Lecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen 2 / 45

### Learning Goals

- Construct a hidden Markov model given a real-world scenario.
- Explain the independence assumptions in a hidden Markov model.
- Calculating the filtering probability for a time step in a hidden Markov model.
- Describe the justification for a step in the derivation of the filtering formulas.

Learning Goals

#### A Model for the Umbrella Story

Inference in Hidden Markov Models

**Filtering Calculations** 

Filtering Derivations

**Revisiting Learning Goals** 

CS 486/686: Intro to AI Lecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen 4 / 45

### Inference in a Changing World

So far, we can reason probabilistically in a static world. However, the world evolves over time.

In an evolving world, we have to reason about a sequence of events.

Applications of sequential belief networks:

- weather predictions
- stock market predictions
- patient monitoring
- robot localization

 $\rightarrow$  A robot is trying to figure out where it is.

speech and handwriting recognition

CS 486/686: Intro to AI Lecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen 5 / 45

### Speech Recognition

#### **HMMs for Speech**

• Example of using HMM for word "yes" on an utterance:

#### Figure: Speech Recognition

CS 486/686: Intro to AI Lecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen 6 / 45

You are a security guard stationed at a secret underground facility.

You want to know whether it's raining today.

Unfortunately, your only access to the outside world occurs each morning when you see the director coming in with, or without, an umbrella.

#### States and Observations

- The world contains a series of time slices.
- Each time slice contains a set of random variables, Let S<sub>t</sub> denote the unobservable state at time t.

Let  $O_t$  denote the signal/observation at time t.

What are the random variables in the umbrella world?

#### States and Observations

- The world contains a series of time slices.
- Each time slice contains a set of random variables, Let S<sub>t</sub> denote the unobservable state at time t.

Let  $O_t$  denote the signal/observation at time t.

What are the random variables in the umbrella world?

- $\rightarrow S_t$  denotes whether it rains at time t.
- $O_t$  denotes whether the director carries an umbrella at time t.

#### Transition Model

How does the current state depend on the previous states?

In general, every state may depend on all the previous states.  $P(S_t|S_{t-1} \wedge S_{t-2} \wedge S_{t-3} \wedge \dots \wedge S_0)$ 

Problem: As t increases, the conditional probability distribution can be unboundedly large.

Solution: Let the current state depend on a fixed number of previous states.

CS 486/686: Intro to AI Lecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen 9 / 45

#### K-order Markov Chain

First-order Markov process:

The transition model:

$$P(S_t|S_{t-1} \land S_{t-2} \land S_{t-3} \land \dots \land S_0) = P(S_t|S_{t-1})$$

Second-order Markov process:

The transition model:

$$P(S_t|S_{t-1} \land S_{t-2} \land S_{t-3} \land \dots \land S_0) = P(S_t|S_{t-1} \land S_{t-2})$$

CS 486/686: Intro to AILecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen10 / 45

#### The Markov Assumption

#### The Markov assumption:

The future is independent of the past given the present.

Every day, our slate is wiped clean. We can start fresh. Every day is a new beginning.

The transition model:

$$P(S_t|S_{t-1} \land S_{t-2} \land S_{t-3} \land \dots \land S_0) = P(S_t|S_{t-1})$$

CS 486/686: Intro to AILecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen11 / 45

### Stationary Process

Is there a different conditional probability distribution for each time step?

Stationary process:

- The dynamics does not change over time.
- The conditional probability distribution for each time step remains the same.

What are the advantages of using a stationary model?

 $\rightarrow$  Simple to specify.

Natural: the dynamics typically does not change. If it changes, it's due to another feature that we can model.

A finite number of parameters gives an infinite network.

CS 486/686: Intro to AI Lecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen12 / 45

Transition model for the umbrella story

Let  $S_t$  be *true* if it is raining on day t and *false* otherwise.

$$P(s_0) = 0.5$$

$$P(s_t|s_{t-1}) = 0.7 P(s_t|\neg s_{t-1}) = 0.3$$

CS 486/686: Intro to AlLecturer: Yuntian Deng

Slides: Alice Gao / Blake Vanberlo / Wenhu Chen13 / 45

#### Warm-up Example

What's the chance of raining in day 1?

$$p(s_1 = T) = 0.5 * 0.7 + 0.5 * 0.3 = 0.5$$
$$p(s_1 = F) = 0.5 * 0.3 + 0.5 * 0.7 = 0.5$$

What's the chance of raining in day 2?

$$p(s_2 = T) = 0.5 * 0.7 + 0.5 * 0.3 = 0.5$$
  
 $p(s_2 = F) = 0.5 * 0.3 + 0.5 * 0.7 = 0.5$ 

On day K?

$$p(s_K = T) = p(s_K = F) = 0.5$$

CS 486/686: Intro to AlLecturer: Yuntian Deng

Slides: Alice Gao / Blake Vanberlo / Wenhu Chen14 / 45

#### Sensor model

How does the evidence variable  $O_t$  at time t depend on the previous and current states  $S_0, S_1, \ldots, S_t$ ?

#### (Sensor) Markov assumption:

Each state is sufficient to generate its observation.

$$P(O_t|S_t \land S_{t-1} \land \dots \land S_0 \land O_{t-1} \land O_{t-2} \land \dots \land O_0) = P(O_t|S_t)$$

CS 486/686: Intro to AILecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen15 / 45

#### Complete model for the umbrella story

Let  $S_t$  be *true* if it rains on day t and *false* otherwise.

Let  $O_t$  be *true* if the director carries an umbrella on day t and *false* otherwise.

CS 486/686: Intro to AILecturer: Yuntian Deng

Slides: Alice Gao / Blake Vanberlo / Wenhu Chen16 / 45

#### Warm-up Example

What's the chance of the director carrying an umbrella on day 1?

$$p(O_1 = T) = 0.5 * 0.9 + 0.5 * 0.2 = 0.55$$
  
$$p(O_1 = F) = 0.5 * 0.1 + 0.5 * 0.8 = 0.45$$

What's the chance of the director carrying an umbrella on day 2?

$$p(O_2 = T) = 0.5 * 0.9 + 0.5 * 0.2 = 0.55$$
$$p(O_2 = F) = 0.5 * 0.1 + 0.5 * 0.8 = 0.45$$

On day K?

$$p(O_K = T) = 0.55, p(O_K = F) = 0.45$$

CS 486/686: Intro to AlLecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen17 / 45

Learning Goals

A Model for the Umbrella Story

Inference in Hidden Markov Models

**Filtering Calculations** 

Filtering Derivations

**Revisiting Learning Goals** 

CS 486/686: Intro to AILecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen18 / 45

#### Hidden Markov Model

#### Hidden Markov Model:

- A Markov process
- The state variables are unobservable
- The evidence variables, which depend on the states, are observable

Filtering: Which state am I in right now?

 $\rightarrow$  The posterior distribution over the most recent state given all evidence to date.

Filtering: Which state am I in right now?

 $\rightarrow$  The posterior distribution over the most recent state given all evidence to date.

Prediction: Which state will I be in tomorrow?

 $\rightarrow$  The posterior distribution over the future state given all evidence to date.

Filtering: Which state am I in right now?

 $\rightarrow$  The posterior distribution over the most recent state given all evidence to date.

Prediction: Which state will I be in tomorrow?

 $\rightarrow$  The posterior distribution over the future state given all evidence to date.

**Smoothing:** Which state was I in yesterday?

 $\rightarrow$  The posterior distribution over a past state, given all evidence to date.

**Filtering:** Which state am I in right now?

 $\rightarrow$  The posterior distribution over the most recent state given all evidence to date.

Prediction: Which state will I be in tomorrow?

 $\rightarrow$  The posterior distribution over the future state given all evidence to date.

Smoothing: Which state was I in yesterday?

 $\rightarrow$  The posterior distribution over a past state, given all evidence to date.

► Most likely explanation: Which sequence of states is most likely to have generated the observations? → Find the sequence of states that is most likely to have generated all the evidence to date.

CS 486/686: Intro to AILecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen20 / 45

### Algorithms for the inference tasks

A HMM is a Bayesian network.

We can perform inference using the variable elimination algorithm!

More specialized algorithms:

- The forward-backward algorithm: filtering and smoothing
- The Viterbi algorithm: most likely explanation

Learning Goals

# Given the observations from time 0 to time k, what is the probability that I am in a particular state at time k?

 $P(S_k|o_{0:k})$ 

CS 486/686: Intro to AlLecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen23 / 45

#### Warm-up Question

I already know that the manager brought umbrella yesterday, but he did not bring umbrella today. What's the chance of raining for today, e.g.  $p(S_1|o_0, \neg o_1)$ ?

$$p(s_0) = 0.5$$

$$P(s_t | s_{t-1}) = 0.7$$

$$P(s_t | \neg s_{t-1}) = 0.3$$

$$P(o_t | s_t) = 0.9$$

$$P(o_t | \neg s_t) = 0.2$$

Is  $s_1$  independent of  $o_0$  given  $o_1$ ?

CS 486/686: Intro to AlLecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen24 / 45

#### Warm-up Question

I already know that the manager brought umbrella yesterday, but he did not bring umbrella today. What's the chance of raining for today, e.g.  $p(S_1|o_0, \neg o_1)$ ?

$$p(s_0) = 0.5$$

$$P(s_t|s_{t-1}) = 0.7$$

$$P(s_t|\neg s_{t-1}) = 0.3$$

$$P(o_t|s_t) = 0.9$$

$$P(o_t|\neg s_t) = 0.2$$

$$p(S_1|o_0, \neg o_1) \propto p(S_1, o_0, \neg o_1)$$
  
=  $\sum_{S_0} p(S_0) p(o_0|S_0) p(S_1|S_0) p(\neg o_1|S_1)$ 

CS 486/686: Intro to AlLecturer: Yuntian Deng

Slides: Alice Gao / Blake Vanberlo / Wenhu Chen25 / 45

#### Warm-up Question

I already know that the manager brought umbrella yesterday, but he did not bring umbrella today. What's the chance of raining for today, e.g.  $p(S_1|o_0, \neg o_1)$ ?

$$p(s_0) = 0.5$$

$$P(s_t|s_{t-1}) = 0.7$$

$$P(s_t|\neg s_{t-1}) = 0.3$$

$$P(o_t|s_t) = 0.9$$

$$P(o_t|\neg s_t) = 0.2$$

$$p(S_1|o_0, \neg o_1) \propto p(S_1, o_0, \neg o_1)$$
  
=  $\sum_{S_0} p(S_0) p(o_0|S_0) p(S_1|S_0) p(\neg o_1|S_1)$ 

Operations: (3 mult \* 2 + 1 add) \* 2 = 14 ops

CS 486/686: Intro to AILecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen25 / 45

#### Filtering through Enumeration

I already know that the manager's behavior in these past K days, what's the chance of raining for today, e.g.  $p(S_k|o_0, \dots, o_k)$ ?

$$p(s_0) = 0.5$$

$$P(s_t|s_{t-1}) = 0.7$$

$$P(s_t|\neg s_{t-1}) = 0.3$$

$$P(o_t|s_t) = 0.9$$

$$P(o_t|\neg s_t) = 0.2$$

$$p(S_k|o_0,\cdots,o_k) \propto p(S_k,o_0,\cdots,o_k)$$
  
=  $\sum_{S_k} \cdots \sum_{S_0} p(S_0)p(o_0|S_0) \cdots p(o_k|S_K)$ 

CS 486/686: Intro to AlLecturer: Yuntian Deng

Slides: Alice Gao / Blake Vanberlo / Wenhu Chen26 / 45

#### Filtering through Enumeration

I already know that the manager's behavior in these past K days, what's the chance of raining for today, e.g.  $p(S_k|o_0, \dots, o_k)$ ?

$$p(s_0) = 0.5$$

$$P(s_t|s_{t-1}) = 0.7$$

$$P(s_t|\neg s_{t-1}) = 0.3$$

$$P(o_t|s_t) = 0.9$$

$$P(o_t|\neg s_t) = 0.2$$

$$p(S_k|o_0,\cdots,o_k) \propto p(S_k,o_0,\cdots,o_k)$$
  
=  $\sum_{S_k} \cdots \sum_{S_0} p(S_0)p(o_0|S_0) \cdots p(o_k|S_K)$ 

Operations:  $O(K \times 2^K)$  ops

CS 486/686: Intro to AlLecturer: Yuntian Deng

Slides: Alice Gao / Blake Vanberlo / Wenhu Chen26 / 45

### Filtering through Forward Recursion

Let 
$$f_{0:k} = P(S_k | o_{0:k}).$$

Base case:

$$f_{0:0} = \alpha P(o_0|S_0)P(S_0)$$

Recursive case:

$$f_{0:k} = \alpha P(o_k|S_k) \sum_{s_{k-1}} P(S_k|s_{k-1}) f_{0:(k-1)}$$

CS 486/686: Intro to AlLecturer: Yuntian Deng

Slides: Alice Gao / Blake Vanberlo / Wenhu Chen27 / 45

### Filtering through Forward Recursion

$$f_{0:k} = \alpha P(o_k|S_k) \sum_{s_{k-1}} P(S_k|s_{k-1}) f_{0:(k-1)}$$

**Operations:** 

 $f_{0:0}$  has 2 mult ops,  $f_{0:1}$  has (2 mult + 1 add + 1 mult) \* 2 ops  $f_{0:2}$  has (2 mult + 1 add + 1 mult) \* 2 ops

Total Operation: O(k) ops

CS 486/686: Intro to AlLecturer: Yuntian Deng

Slides: Alice Gao / Blake Vanberlo / Wenhu Chen28 / 45

The Umbrella Story

$$P(s_0) = 0.5$$

$$P(s_t|s_{t-1}) = 0.7$$

$$P(s_t|\neg s_{t-1}) = 0.3$$

$$P(o_t|s_t) = 0.9$$

$$P(o_t|\neg s_t) = 0.2$$

CS 486/686: Intro to AILecturer: Yuntian Deng

Slides: Alice Gao / Blake Vanberlo / Wenhu Chen29 / 45

#### A Filtering Example

Consider the umbrella story.

Assume that  $O_0 = t$  and  $O_1 = t$ .

Let's calculate  $f_{0:0}$  and  $f_{0:1}$  using forward recursion.

Here are the useful quantities from the umbrella story.

$$\begin{split} P(s_0) &= 0.5 \\ P(o_t|s_t) &= 0.9, P(o_t|\neg s_t) = 0.2 \\ P(s_t|s_{(t-1)}) &= 0.7, P(s_t|\neg s_{(t-1)}) = 0.3 \end{split}$$

CS 486/686: Intro to Al Lecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen30 / 45

A Filtering Example - Base Case of Forward Recursion Calculate  $f_{0:0} = P(S_0|o_0)$ .

CS 486/686: Intro to AlLecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen31 / 45

# A Filtering Example - Base Case of Forward Recursion Calculate $f_{0:0} = P(S_0|o_0)$ .

$$\begin{aligned} \alpha &= 1/p(o_0), constant\\ P(s_0|o_0) &= \alpha P(o_0|s_0)P(s_0) = \alpha \, 0.9 * 0.5 = \alpha \, 0.45\\ P(\neg s_0|o_0) &= \alpha P(o_0|\neg s_0)P(\neg s_0) = \alpha \, 0.2 * 0.5 = \alpha \, 0.1\\ P(s_0|o_0) &= 0.45/(0.45 + 0.1) = 0.818\\ P(\neg s_0|o_0) &= 1 - 0.818 = 0.182 \end{aligned}$$

A more compact approach:

$$P(S_0|o_0) = \alpha P(o_0|S_0)P(S_0)$$
$$= \alpha \langle 0.9, 0.2 \rangle * \langle 0.5, 0.5 \rangle$$
$$= \alpha \langle 0.45, 0.1 \rangle$$
$$= \langle 0.818, 0.182 \rangle$$

CS 486/686: Intro to AlLecturer: Yuntian Deng

Slides: Alice Gao / Blake Vanberlo / Wenhu Chen32 / 45

A Filtering Example - Recursive Case of Forward Recursion

Calculate 
$$f_{0:1} = \alpha P(o_1|S_1) \sum_{s_0} P(S_1|s_0) f_{0:0}$$

where  $f_{0:0} = \langle 0.818, 0.182 \rangle$ .

CS 486/686: Intro to AlLecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen33 / 45

A Filtering Example - Recursive Case of Forward Recursion

Calculate 
$$f_{0:1} = \alpha P(o_1|S_1) \sum_{s_0} P(S_1|s_0) f_{0:0}$$
  
where  $f_{0:0} = \langle 0.818, 0.182 \rangle$ .

First, let's expand the formula.

$$P(S_{1}|o_{0:1}) = \alpha P(o_{1}|S_{1}) \sum_{s_{0}} P(S_{1}|s_{0}) P(s_{0}|o_{0})$$
  
=  $\alpha P(o_{1}|S_{1}) * \left( P(S_{1}|s_{0}) * P(s_{0}|o_{0}) + P(S_{1}|\neg s_{0}) * P(\neg s_{0}|o_{0}) \right)$   
=  $\alpha \langle P(o_{1}|s_{1}), P(o_{1}|\neg s_{1}) \rangle$   
\*  $\left( \langle P(s_{1}|s_{0}), P(\neg s_{1}|s_{0}) \rangle * P(s_{0}|o_{0}) + \langle P(s_{1}|\neg s_{0}), P(\neg s_{1}|\neg s_{0}) \rangle * P(\neg s_{0}|o_{0}) \right)$ 

CS 486/686: Intro to AILecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen34 / 45

A Filtering Example - Recursive Case of Forward Recursion

Calculate 
$$f_{0:1} = \alpha P(o_1|S_1) \sum_{s_0} P(S_1|s_0) f_{0:0}$$

where  $f_{0:0} = \langle 0.818, 0.182 \rangle$ .

$$P(S_1|o_{0:1}) = \alpha \langle P(o_1|s_1), P(o_1|\neg s_1) \rangle \\ * (\langle P(s_1|s_0), P(\neg s_1|s_0) \rangle * P(s_0|o_0) \\ + \langle P(s_1|\neg s_0), P(\neg s_1|\neg s_0) \rangle * P(\neg s_0|o_0))$$

$$= \alpha \langle 0.9, 0.2 \rangle (\langle 0.7, 0.3 \rangle * 0.818 + \langle 0.3, 0.7 \rangle * 0.182) = \alpha \langle 0.9, 0.2 \rangle (\langle 0.5726, 0.2454 \rangle + \langle 0.0546, 0.1274 \rangle) = \alpha \langle 0.9, 0.2 \rangle * \langle 0.6272, 0.3728 \rangle = \alpha \langle 0.56448, 0.07456 \rangle = \langle 0.883, 0.117 \rangle$$

CS 486/686: Intro to AILecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen35 / 45

#### Example: Filtering

Consider a hidden Markov model with 4 time steps.

$$P(s_0) = 0.4$$

$$P(s_t|s_{t-1}) = 0.7 P(s_t|\neg s_{t-1}) = 0.2$$

$$\begin{aligned} P(o_t|s_t) &= 0.9 \\ P(o_t|\neg s_t) &= 0.2 \end{aligned}$$

Calculate  $P(S_2|o_0 \land o_1 \land o_2)$ .  $\rightarrow$  i.e.  $\alpha f_{0:2}$ 

CS 486/686: Intro to AILecturer: Yuntian Deng Slides: Alice Gao / Blake Vanberlo / Wenhu Chen36 / 45

**Q #3:** What is the justification for the step below?

$$= \alpha P(o_k | S_k \land o_{0:(k-1)}) P(S_k | o_{0:(k-1)})$$
  
=  $\alpha P(o_k | S_k) P(S_k | o_{0:(k-1)})$ 

(A) Bayes' rule

- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule
- $\rightarrow$  Correct answer is (D) The Markov assumption.

**Q** #4: What is the justification for the step below?

$$= \alpha P(o_k | S_k) P(S_k | o_{0:(k-1)})$$
  
=  $\alpha P(o_k | S_k) \sum_{s_{k-1}} P(S_k \wedge s_{k-1} | o_{0:(k-1)})$ 

(A) Bayes' rule

- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule

**Q** #4: What is the justification for the step below?

$$= \alpha P(o_k | S_k) P(S_k | o_{0:(k-1)})$$
  
=  $\alpha P(o_k | S_k) \sum_{s_{k-1}} P(S_k \wedge s_{k-1} | o_{0:(k-1)})$ 

(A) Bayes' rule

- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule
- $\rightarrow$  Correct answer is (E) The sum rule.

### Revisiting Learning Goals

- Construct a hidden Markov model given a real-world scenario.
- Explain the independence assumptions in a hidden Markov model.
- Calculating the filtering probability for a time step in a hidden Markov model.
- Describe the justification for a step in the derivation of the filtering formulas.
